

# HOW TO MAKE YOUR OWN WOODWIND INSTRUMENT

## SUPPLIES:

1 plastic straw  
1 pair of scissors  
1 piece of paper  
tape  
markers and stickers or other things to decorate!

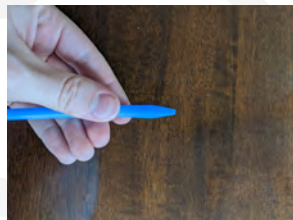

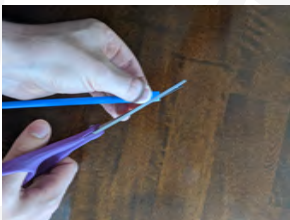

## STEP 1:

Pinch the end of your plastic straw until it is flat.

## STEP 2:

With the help of an adult, cut the end of the straw about half an inch from the tip at an angle towards the center of the end of the straw. Repeat on the other side of the straw leaving a few centimeters of the end of the straw that are flat across.

## STEP 3:

Roll your piece of paper into a cone shape leaving a hole at one end long enough to fit your straw through. Tape your paper cone to secure it.

## STEP 4:

Put your straw through the small hole in your paper cone and tape the cone to the straw.

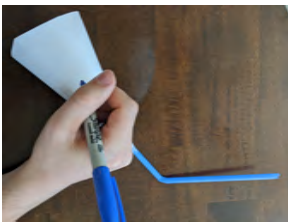

## STEP 5:

Cut the end of your paper cone so it is even.

## STEP 6:

Use your markers and stickers to decorate your wind instrument.

## STEP 7:

Put the pointed end of the straw in your mouth making sure not to bite down. Leave room for the pointed end of your wind instrument to vibrate. Start making music by blowing through your new wind instrument!
